

Economics

Akerlof (1970)

quality uncertainty

Information asymmetry about item quality can depress or collapse stranger-to-stranger exchange.

market for "lemons"

Behavioral Science

Morozov & Feigel (2026)

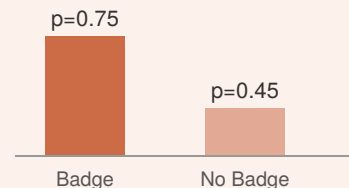

opponent-specific responses

Strangers can sustain cooperation without full observability, through responses tailored to a counterpart's recent behavior.

Computer Science

Static Space trust game

seed = 42, reproducible in Colab

Lightweight, Auditable AI Trust Signal

narrows adverse selection · substitutes for full observability
resource-aware, inspectable, no dedicated compute runtime

Campus Circular-Economy Platform

completed stranger-to-stranger exchange → SDG Target 12.5

indicator: share of initiated requests reaching completion

Solid within-panel elements show each discipline's own evidence; dashed arrows show the proposed synthesis.
